

QDEU 870 MDU Distribution Amplifier:

Features:

- ▶ 870 MHz, 2-way models
- ▶ Cost-effective, high performance, fully functional MDU amplifier with high slope capability
- ▶ Active 2-way eliminating a need for a return amplifier
- ▶ Forward amplifier uses cascaded GaAs hybrids in several gain choices
- ▶ GaAs technology versions have higher output level capability & lower noise figure than previous technologies
- ▶ Fixed EQ socket & plug-in pad socket in the front end can accommodate wide range of input signal levels
- ▶ Plug-in hybrids & accessories
- ▶ Shipped with variable plug-in attenuator in plug-in pad style minimizing need to purchase additional input pads
- ▶ Interstage gain control allows up to 10 dB output level adjustment while interstage slope control allows for adjustment of 15 dB of output slope
- ▶ Factory-selected plug-in interstage EQ can be used to extend output slope capability
- ▶ Variable gain & tilt (forward & reverse)
- ▶ Includes external class II UL approved power transformer
- ▶ 5-42 MHz, 2-way return path has input test point & plug-in input pad before the amplifier, with 22 db gain
- ▶ Return circuit has variable slope control & variable gain control after the amplifier
- ▶ 20 dB return path output test point can be used to set output levels
- ▶ Forward amplifier output test point can be used to insert return path carriers while monitoring carriers signal level at the return path input test point &/or the return path output test point when setting levels
- ▶ Small physical size increases convenience of many installations where space constraint is an issue
- ▶ Maximum total loop gain of 65 dB recommended for 2-way amplifiers
