

#### Highlights

Compatible with Windows®, Macintosh®, and UNIX® computers

DOCSIS 3.0 Certified, featuring:

- Channel bonding of up to four downstream channels and four upstream channels increasing data rates of well over 100 Mbps in each direction
- Supports IPv4 and IPv6 to expand network addressing capabilities
- Enhanced security: supports AES traffic encryption

Enhanced network management

Ability to provision and manage IP multicast

GigE (RJ-45) data port with Auto Negotiate and Auto MDIX

User-friendly online diagnostics

Updated SB6120 with a sleeker enclosure and additional features:

- Power saving Energy Conservation Switch allows user to disable the modem when not in use (optional feature)
- Internal Low Pass Filter to eliminate MoCA signal overload

Strengthen your broadband leadership — Count on Motorola's SURFboard DOCSIS® / EuroDOCSIS 3.0 CPE to help you deliver innovative, ultra broadband data services to your premium customers.

#### High Value and Increased Data Rates

Motorola's easy-to-use SB6121 SURFboard DOCSIS 3.0 Cable Modem unlocks the potential of offering innovative high-bandwidth data and multimedia services to customers.

Utilizing the power of DOCSIS 3.0, the SB6121 enables channel bonding of up to four downstream channels and four upstream channels, which allows an operator to offer their customers advanced multimedia services with data rates of well over 100 Mbps in each direction. The SB6121's higher-speed services enable operators to:

- Protect their installed base of high-speed data customers
- Deliver high-bandwidth, multimedia services
- Deliver competitive, high-capacity commercial services to their business customers

#### **Economic and Flexible**

•

The Motorola SB6121 SURFboard DOCSIS 3.0 Cable Modem provides operators with an economic option for providing Ultra-Broadband services, with four times the current maximum user data throughput approximating 160 Mbps in DOCSIS mode and 195 Mbps in EuroDOCSIS mode\*, without the need for hybrid fiber coax (HFC) plant upgrade. Maximizing an operator's current infrastructure investment, the SB6121 can be deployed without service interruption. Backwards compatible to DOCSIS 1.0, 1.1 and 2.0, the SB6121 also supports both IPv4 and IPv6, Advanced Encryption Services, and all other DOCSIS 3.0 standards.

As part of Motorola DOCSIS 3.0 Ultra-Broadband family of products, the SB6121 includes an enhanced tuner that supports up to a 1 GHz downstream input, which allows operators to increase the frequency spectrum for deployment of new high-value services, such as bandwidth on-demand, commercial services, interactive gaming, and IPTV, to their customers.

The SB6121 features a 10/100/1000Base-T Ethernet (RJ-45) port, as well as intuitive, easy-to-read front-panel operational status LEDs. Operators can optionally activate dual colored LEDs for their customer to have visual verification of bonded channels and GigE link use.

With Motorola's cable modems, high-speed Internet access is always at your fingertips – always on and always connected. The SB6121 is the ideal competitive solution for the high-end residential user, the small home office owner, and the medium to large business enterprise.

In addition to delivering high-quality gateways to its customers, Motorola is also committed to helping its customers reduce their environmental footprint. We approach this in several ways: improving the environmental profile of our products, running our operations in a safe and energy-efficient manner and helping our customers to be greener when they use our products.

Motorola's SURFboard portfolio of customer premises equipment (CPE) helps service providers lower their energy consumption, thereby helping them reduce their carbon footprint. Motorola has a global commitment to be part of the solution to climate change, and has worked for years to continually improve our environmental profile. We are in step with our customers and their increasing interest in partnering with a company that helps them reduce their environmental impact, while offering compelling products to help them grow their ecoconscious customer base.

Motorola is working to make products with a reduced environmental impact. In the development of our next-generation SURFboard portfolio of customer premises equipment, we have focused on energy efficiency, lead-free manufacturing, and packaging / recycling enhancements. Depending on models and market, our units are ENERGY STAR qualified and compliant with European Code of Conduct regulations. In addition, the devices and power supplies are lead-free and RoHS compliant. Finally, all new SURFboard CPE use environmentally friendly package designs. The CPE are available in single bulk pack boxes that eliminate the use of suspension plastic and reduce box size, thereby reducing waste and transport costs. Motorola's SURFboard modem's packaging is 100% recyclable and is marked with standard recycling codes to make it easier for our customers to identify recycling opportunities.

Motorola's Service Assured DOCSIS<sup>®</sup> 3.0 Solutions enable you to deliver increased bandwidth, enhance security, and cost-effectively deploy data services to your bandwidthdemanding consumers — all while maximizing current infrastructure investment and lowering capital spend.
