

AMT Technical Services Customer Testimonials

"We have found AMT to be extremely professional in the execution of service as well as responsive to any concerns that we had. We have found consistent and regular staff availability making AMT to be considered as part of the team."

Jeff Jay, S&T Communications, Network Operations

"AMT has been great to work with. They are patient, professional and always ready to lend a hand or advice when needed, even if it's not in the SOW. As we continue to implement future DOCSIS and HFC upgrades I plan to keep AMT involved in the design and implementation process as much as possible. I would recommend them to anybody wanting to do the same."

Chris Mullens, Rainbow Communications, Director of Operations

"The training AMT gave us was one of the best and most beneficial training sessions we have ever had at the GEPB. After you guys left, by using the correct alignment procedures taught to us, we were able to increase the SNR on our existing nodes by 7-8 dB on the return. That is a HUGE gain and we are seeing the benefits from it every day."

Josh Francis, Glasgow Electric Plant Board, Chief Technical Officer
