

Multi-Vertical Program*

CommScope's Service Provider Managed Networking solution offers programs to fit many vertical markets. The solution includes all the services from design through install to operations and support. The Multi-Vertical Program (MVP) covers the requirements of small-medium business, hospitality, healthcare, venue and mixed-use markets. The MVP Portal provides a branded splash page with secure onboarding, campaign, survey, ad placement, and service area location features.

CommScope streamlines the service provider's path to offering managed networking by optimizing wired and Wi-Fi coverage with a cloud-hosted, versatile and cost-effective solution. It means operators (and their customers) do not need in-house IT personnel to build, manage, and support the network. This also reduces capital investment.

The SP Managed Networking solution results in a fast launch of Wi-Fi services, all backed by the experience and stability of CommScope as a partner.
